

Coronavirus

How do you get coronavirus?

Coronavirus is spread between people who are within about 6 feet of each other. The virus is spread mainly through the droplets that leave an infected person's body when coughing or sneezing. Others get exposed to the virus when they come in contact with the infected droplets via the mouth, nose or eyes.

What can I do to avoid getting coronavirus?

- Clean frequently touched surfaces with disinfectant cleaners. Surfaces include tables, doorknobs, light switches, handles, desks, toilets, faucets and sinks.
- Wash your hands often, for at least 20 seconds, using soap and warm water or alcohol-based hand sanitizer.
- Avoid touching your mouth, nose or eyes—especially when your hands are not clean.

What should I do if I feel sick with a respiratory illness?

If you are running a fever, you may be contagious. For a fever over 100.4° F, signs of a fever or shortness of breath, call your physician.

When you arrive at the center, regardless if you are showing signs or symptoms of respiratory illness or fever, you will be asked to put on a face mask in the lobby. Our care team will ask you questions to evaluate your condition before bringing you to the treatment area.

Remember to wash your hands...

- After blowing your nose, coughing or sneezing. Be sure to cover your cough or sneeze with a tissue, then throw the tissue in the trash.
- After using the restroom.
- Before eating or preparing food.
- After contact with animals or pets.
- Before and after providing care for another person who needs assistance, such as a child.

The coronavirus situation is changing quickly, and we will continue to provide updated information as it becomes available.
